

GO-TO-MARKET PLAYBOOK · SEPTEMBER 2026

One account for everything a vehicle needs.

Saarthi is the app an Indian transport business runs on: find the work or post it, quote it, track it live, keep the papers straight, watch the tolls and the EMI, and get everybody home. Goods vehicles, taxis, buses and the yards and buyers in between — on one subscription.

01 · PROBLEM

Five apps, a diary and forty phone calls a day. The load board does not know the truck, the truck does not know the papers, the papers do not know the money.

02 · SOLUTION

One account where the job runs end to end — need posted, bids received, trip tracked, documents held, cost known, delivery proved.

03 · CUSTOMER VALUE

Fewer vendors, fewer calls, fewer surprises — and a record that settles an argument about what was delivered and when.

04 · REVENUE

₹99–₹199 a month, +₹75 per extra vehicle, ₹499 once for a tracker. Recurring, per vehicle, from day one.

What are we selling?

Not a GPS tracker. Not a load board. Saarthi is the operating layer for a vehicle business — and for the people who hire one.

If a marketer can only remember one page, this is it.

PRODUCT

A subscription app that runs the whole job

Web and Android. One account holds the vehicles, the drivers, the work, the documents, the tolls, the loans, the maintenance and the money trail.

A fitted tracker is **optional** — the driver's phone already reports position.

WEB APP

DRIVER APP

VEHICLE TERMINAL

OPTIONAL TRACKER

CUSTOMER

Four buyers, one platform

- **Fleet owners** — 1 to 100+ goods vehicles
- **Taxi, travel & tour operators** — passenger fleets
- **Material suppliers** — sand, cement, aggregate yards
- **Buyers** — builders, factories, traders, households
- **District associations** — roadside help for members

BUYERS PAY NOTHING The demand side is free on purpose. It is what makes the supply side worth paying for.

PROBLEM

Nothing joins up, so a person does the joining

- Work is found on WhatsApp groups and through brokers who take a cut
- Location is a phone call to the driver, repeated all day
- Permits, fitness, insurance and licences expire unnoticed until a checkpoint
- Toll, fuel and EMI are known at the end of the month, not during the trip
- Proof of delivery is a photograph in somebody's gallery

OUTCOME

The job has one home, from need to proof

- Post a need — verified businesses bid, you compare and award
- The trip exists the moment you accept. It tracks itself
- Papers warn you before they expire, not after
- Cost per trip is visible while the trip is running
- Every number traces back to a record you can open

CUSTOMER PROBLEM

"I spend my day on the phone finding work, chasing drivers, and hoping the papers are in order."

PRODUCT

Saarthi — one account for the work, the vehicle, the paperwork, the cost and the safety net.

CUSTOMER OUTCOME

More loaded kilometres, fewer surprises, and a business that can be handed to somebody else to run.

Where we actually are, and market it accordingly. The product is built and works end to end, but Saarthi has not launched publicly, has no paying customers and no self-serve checkout yet. Every number in this playbook is therefore a **target**, never a result. Do not publish customer counts, testimonials or case studies until real ones exist — the first thing we sell is that nothing here is faked.

Who should we target?

Six real segments, taken from the account types the product actually supports. Each one buys for a different reason, so each one gets a different first sentence.

Owner-driver & small fleet

PRIMARY

1–5 goods vehicles. Often drives one himself. Hindi or a regional language first.

Today: WhatsApp groups, a broker, a diary, a ₹6,000 tracker he renews every year.

Frustration: empty return legs, commission on every load, no idea what a trip actually earned.

Needs: work, live location, papers that do not expire on him.

Would pay for: one more loaded return trip a month pays the subscription twenty times over.

REACH

Transport nagar, fuel pumps, tyre & repair shops, district associations, WhatsApp, YouTube in Hindi.

Mid-size fleet operator

PRIMARY

10–100 vehicles, a dispatcher or two, a manager, a munshi keeping the books.

Today: a telematics contract, spreadsheets, and staff who join the two by hand.

Frustration: paying per vehicle for tracking alone, then paying people to do everything around it.

Needs: dispatch, driver accountability, document compliance, cost per kilometre.

Would pay for: replacing three vendors and a clerk's week with one bill.

REACH

Direct/field sales, referrals, LinkedIn, industry associations, trade press, Google search on tracker pricing.

Taxi, travel & tour operator

GROWTH

Cars, SUVs and buses. Sells journeys, not tonnes. Usually ignored by freight software.

Today: a shop window on a travel portal and a phone that has to ring.

Frustration: no way to see who nearby wants a car on Tuesday; aggregators take the customer.

Needs: demand, vehicle and driver management, and to keep the customer relationship.

Would pay for: incoming cab and tour requests they can quote directly.

REACH

Instagram, tourism & hotel partnerships, taxi unions, local Facebook groups, Google search.

Material supplier / yard

GROWTH

Sand, aggregate, cement, bricks. Owns stock, not vehicles.

Today: phone orders, a stock register, and delivery arranged separately every time.

Frustration: orders lost to whoever answered first; stock and reservations tracked on paper.

Needs: incoming demand, yard stock, and a carrier attached to the order.

Would pay for: requirements arriving without a salesperson chasing them.

REACH

Builder & contractor networks, hardware markets, field sales, WhatsApp Business, local search.

The buyer — builder, factory, trader

FREE · LIQUIDITY

Needs material moved, a truck booked, or a car for a site visit. Pays nothing.

Today: rings three transporters, takes the first price, then rings the driver all day.

Frustration: no comparison, no proof, no idea where the consignment is.

Needs: competing quotes, and to watch the delivery arrive without calling.

Would pay for: nothing — and that is the point. Buyers are the demand that makes a paid seat worth having.

REACH

Meta and Google ads, contractor groups, supplier referral, SEO on “book a truck” intent.

District transport association

CHANNEL

Hundreds of member vehicles. Coordinates roadside help. One relationship, many accounts.

Today: a phone tree and a WhatsApp group when a member breaks down at night.

Frustration: no way to see who is actually nearby and available to help.

Needs: an emergency queue, a member roster, and something worth the membership fee.

Would pay for: a service they can offer members — and we get distribution.

REACH

Direct relationship with office bearers. Treat as **distribution**, not as a single sale.

Drivers are users, not buyers. They never pay and never see a price — but they decide whether the fleet keeps using Saarthi. Market to them for adoption and retention (safety, score, achievements, their own language), and to the owner for the sale.

The customer pain map

Four places it hurts. Lead with the red ones — they are the pains people already know they have and are already spending money on.

● HIGH-VALUE PAIN — THEY PAY TO FIX THIS TODAY

● IMPORTANT PAIN — COSTS MONEY QUIETLY

● CONVENIENCE PAIN — WINS THE DEMO, NOT THE DEAL

MONEY

What it costs to run the vehicle

- **HIGH** Empty return legs — the truck is paid for either way
- **HIGH** Broker commission on work he could have won directly
- **HIGH** Tracker hardware at ₹2,500–₹6,000, then a renewal every year
- **MID** Toll and fuel discovered at month end, not during the trip
- **MID** A missed EMI, and the penalty that follows
- **MID** Software per vehicle for tracking, then staff to do the rest

SAARTHI ANSWERS

Return loads, direct bidding, a ₹499 one-time tracker, live trip cost, EMI reminders — all inside one ₹99–₹199 subscription.

TIME

The day spent on the phone

- **HIGH** “Where are you?” — the same call, all day, every driver
- **HIGH** Finding work: groups, brokers, calls, repeat
- **MID** Comparing quotes across three separate phone conversations
- **MID** Hunting a document when a checkpoint asks for it
- **LOW** Finding a weighbridge, a mechanic or a pump on an unfamiliar route
- **LOW** Re-keying the same trip into a register at night

SAARTHI ANSWERS

Live map, sealed bids side by side, documents on the vehicle record, nearby services, and a trip that writes its own history.

TRUST

Who am I actually dealing with

- **HIGH** Paying an advance to a transporter nobody can vouch for
- **HIGH** No proof of what was delivered, when, in what condition
- **MID** A licence or fitness certificate that quietly expired
- **MID** Load boards full of stale or invented listings
- **MID** A driver's record that does not travel with him
- **LOW** Buying a used vehicle on somebody's word

SAARTHI ANSWERS

Verification for business, vehicle and driver; no seeded or invented listings anywhere; QR identity; an evidence pack on every resale.

SAFETY

Getting everybody home

- **HIGH** A breakdown at 2am on a highway with nobody to call
- **HIGH** An accident, and no one knowing where the vehicle is
- **MID** No idea how the vehicle is actually being driven
- **MID** Entering a city inside a no-entry window
- **MID** A breakdown that a service record would have predicted
- **LOW** Unfamiliar hazards, checkpoints and cameras on the route

SAARTHI ANSWERS

One-tap SOS matched to nearby Saarthi vehicles and the district association, explainable driver scoring, city access rules, maintenance risk.

The marketing consequence. Money and Safety are where the wallet already opens — operators pay for trackers and pay brokers today. Lead every campaign with a **money** pain or a **safety** pain, and let convenience carry the demo. Never lead with a feature list; lead with the cost of the day they are having now.

Why should customers care?

Nobody buys a feature. Run every capability through this chain before it goes into an ad, a caption or a call.

FEATURE	BENEFIT — SAY THIS	CUSTOMER OUTCOME	BUSINESS VALUE
Live tracking with no device	Know where the vehicle is without calling the driver.	The “where are you” call disappears from the day, for both of them.	Dispatch decisions in minutes; no hardware to buy before you start.
Requirements & sealed bidding	Say what you need once; competing prices come to you.	Prices arrive side by side instead of through three phone calls.	No commission to a middleman on work you could have won yourself.
Return loads	Sell the empty leg home.	The trip back stops being dead kilometres.	Revenue on fuel and driver hours you were paying for anyway.
Document expiry engine	Your papers warn you before they expire — not at the checkpoint.	No scramble, no detention, no fine on a permit nobody was watching.	Avoided penalties and avoided idle days, per vehicle, every year.
Trip record & proof of delivery	The delivery proves itself.	A dispute ends with a record instead of an argument.	Invoices settle faster; fewer deductions you cannot contest.
FASTag, toll & fuel per trip	Know what the route actually cost — while it is still running.	Quoting stops being a guess based on last year.	Correct pricing on every quote; margin protected before the trip, not after.
One-tap SOS network	Somebody nearby is already on the way.	A breakdown at 2am is no longer a man alone on a highway.	Drivers stay. Replacing a driver costs far more than the subscription.
Explainable driver scoring	See how the vehicle is being driven, and why the score moved.	A conversation with the driver based on facts, not suspicion.	Lower accident, fuel and maintenance cost on the same vehicles.
23 Indian languages	Your driver uses it in his own language.	The app gets opened instead of ignored.	Software you already paid for actually gets used — the whole return depends on it.

✗ **Never write this** — “Real-time GPS tracking with geofencing and route deviation alerts.” It describes the software, not his day.

✓ **Write this** — “Stop calling the driver to ask where he is.” Same capability. One is a spec sheet; one is his Tuesday.

Why us?

Eight things that are true of Saarthi and not comfortably true of the alternatives. Every one carries the product capability that backs it — if a claim ever stops being true, stop using it.

01 Four markets, one front door

WHY IT MATTERS

A builder needs cement, a lorry to carry it and a car for the site visit. Today that is three apps and six phone calls.

PROOF

One requirement covers material supply, freight, cab hire and tour packages. Only verified businesses that qualify for that market can see and bid on it.

INSTEAD OF — THE ALTERNATIVE TODAY

Three separate apps, or a broker who charges for the introduction.

HOOK

"Say what you need. Once."

02 Goods and passengers, one platform

WHY IT MATTERS

Freight software ignores taxi and tour operators. Travel portals ignore lorries. An operator who runs both pays two vendors.

PROOF

Ten vehicle classes from truck to auto-rickshaw. Passenger operators get their own booking surface; freight-only tools are hidden from them rather than sold to them.

INSTEAD OF — THE ALTERNATIVE TODAY

Freight software that has no idea what a tour package is, and travel portals that cannot hold a lorry.

HOOK

"Trucks, taxis, buses — one app that knows the difference."

03 Priced like a recharge

WHY IT MATTERS

A man with three vehicles does not buy ₹2,000-a-month software. He buys ₹99.

PROOF

Free / ₹99 / ₹199 a month. Every extra vehicle ₹75. A ten-vehicle fleet on Business is **₹874 a month** — the whole platform, not tracking alone.

INSTEAD OF — THE ALTERNATIVE TODAY

Per-vehicle contracts quoted annually and negotiated, with the price behind a "request a demo" form.

HOOK

"Less than a phone recharge. Per vehicle."

04 Hardware optional — and bought once

WHY IT MATTERS

The industry sells you a device, then rents it back to you every year for as long as you own the vehicle.

PROOF

The driver's phone reports position on every plan. The fitted Saarthi Tracker is **₹499 once, per vehicle**, with no recurring charge at all.

INSTEAD OF — THE ALTERNATIVE TODAY

A device at ₹2,500–₹6,000, then a renewal every single year for as long as you own the vehicle.

HOOK

"₹499 once. No renewal. Ever."

05 23 Indian languages

WHY IT MATTERS

The driver and the munshi are the daily users. Software in English is software nobody opens, and software nobody opens returns nothing.

PROOF

English plus all 22 Eighth Schedule languages, each in its own script.

हिन्दी · बांग्ला · தமிழ் · తెలుగు · ગુજરાતી · ಕನ್ನಡ · മലയാളം · ਪੰਜਾਬੀ · ଓଡ଼ିଆ · اُردو

INSTEAD OF — THE ALTERNATIVE TODAY

An English dashboard the owner reads out to the driver over the phone.

HOOK

"Your driver's app, in your driver's language."

06 Safety is not an upsell

WHY IT MATTERS

Everyone else puts the safety features on the expensive tier. A breakdown at 2am does not check which plan you bought.

PROOF

One-tap SOS on **every plan that runs a vehicle, from ₹99**. It widens the search radius until a nearby Saarthi vehicle or the district association responds.

INSTEAD OF — THE ALTERNATIVE TODAY

Safety bundled into the most expensive tier — or a helpline that takes down your details.

HOOK

"One tap. Somebody nearby already knows."

07 Nothing here is invented

WHY IT MATTERS

Load boards are full of stale and fabricated listings. Buyers have learnt to distrust every number they are shown.

PROOF

No seeded demand, no fabricated listings, no invented ratings anywhere in the product. Every business, vehicle and bid was created by a real person, and businesses, vehicles and drivers are verified against documents.

INSTEAD OF — THE ALTERNATIVE TODAY

Boards where a listing may be weeks stale, already taken, or posted by somebody with nothing to move.

HOOK

"Every load on Saarthi is somebody's actual load."

08 Every number can be opened

WHY IT MATTERS

Owners do not act on a dashboard they cannot check. A number without a reason is just somebody else's opinion.

PROOF

Every driver-score change carries a stated reason. Every AI answer cites the records it used. Facts, calculations and predictions are labelled as different things.

INSTEAD OF — THE ALTERNATIVE TODAY

A score that moved with no reason given, and an "AI insight" with no source behind it.

HOOK

"If we show you a number, we show you where it came from."

Two rules for this page. Never say "the only" or "India's first" — we have not verified either, and one competitor screenshot destroys the campaign. And before advertising the ₹499 tracker at scale, confirm the landed unit cost with Sir: a price that cannot be honoured is worse than no price at all.

Our core marketing message

One promise at the top, and everything below it exists to support that promise. If a piece of copy does not ladder up to the big promise, it does not go out.

BIG PROMISE

Run your whole vehicle business from one app — for less than you pay for tracking alone.

CORE BENEFIT

More loaded kilometres, far fewer phone calls, and nothing that expires behind your back.

FIVE SUPPORTING USPS

ONE FRONT DOOR FOR ANY NEED

CALL TO ACTION

Start free — no card, no device, no salesman.

ONE-LINE MESSAGE — THE LINE EVERYTHING ELSE COMPRESSES TO

Everything your vehicles need, on one account.

10-SECOND PITCH — A LIFT, A STALL, A REEL OPENER

"Saarthi is one app for a transport business. Find the work or post it, track every trip live, keep the papers and the tolls in one place, and get everybody home. From ₹99 a month."

30-SECOND PITCH — A CALL, A STAND, A DEMO OPENER

"Most transporters run the business across five apps, a diary and forty phone calls a day. Saarthi puts it in one place. Post what you need — material, a truck, a cab, a tour — and verified businesses bid on it. Accept one, and the trip exists and tracks itself, without buying a device, because the driver's phone already reports where it is. Papers, FASTag, toll, EMI and service history sit on the same vehicle record, and the papers warn you before they expire. If a driver is in trouble, one tap alerts the vehicles nearest to him. ₹99 a month for your own vehicles, ₹199 for the whole platform, ₹75 for each extra vehicle. It's in 23 Indian languages, and the buyer's side is free."

WEBSITE HEADLINE

Your work, your vehicles, your papers, your people. One app.

WEBSITE SUBHEADLINE

Post a job or win one. Track every trip live without buying a device. Keep documents, tolls and EMI in one place. From ₹99 a month, in 23 Indian languages.

Primary CTA: "Start free". **Secondary:** "See it working on your own vehicle". Until there is a public sign-up, both point at a waitlist and a demo booking — keep the words, change only the destination.

What should we market?

The product does a great deal. Marketing all of it markets none of it. This is the agreed split — and the reason each capability sits where it does.

Hero features

LEAD WITH THESE

Roughly 70% of everything we publish. Each one is a pain the customer already pays somebody to solve.

- **Live tracking with no device to buy** — removes the single biggest objection and the single biggest upfront cost
- **Post a need, get competing bids** — the only feature that makes him money rather than saving it
- **₹99 / ₹199 / ₹75 per vehicle** — the price *is* the campaign; it reframes the whole category
- **One-tap SOS** — the most shareable and most emotional thing we have
- **Documents that warn before they expire** — a fine everyone in the trade has personally paid

Supporting features

DEPTH

They answer “is that all it does?” Use them in demos, comparison pages and second-touch content — never as a campaign headline.

- FASTag balance, toll crossings and cost per plaza
- Vehicle loans, EMI schedules and reminders
- Maintenance, service history, parts and warranty
- Explainable driver scoring and achievements
- Fuel records and cost per kilometre
- Nearby services and published fuel prices
- QR identity for drivers and vehicles
- Used-vehicle marketplace with an evidence pack
- Trip replay and delivery proof

Differentiators

WIN THE COMPARISON

Deploy these the moment a prospect names a competitor, and on every comparison page.

- **23 Indian languages** — very hard to copy, instantly obvious in a screenshot
- **Goods and passengers together** — nobody has to choose a category
- **₹499 tracker, bought once** — directly attacks the rental model the category runs on
- **No fabricated listings or ratings** — the trust claim a load board cannot make
- **Explainable numbers and cited AI** — separates us from “AI-powered” claims
- **Association network** — a distribution asset as much as a feature
- **Return loads and city access rules** — specific, and specific sells

Do not lead with

HOLD BACK

Real, useful, and wrong to headline — each would either overpromise or talk past the buyer.

- **AI Copilot & daily brief** — genuinely useful, but the brief is rule-based today. Show it; do not build the brand on it
- **3D maps, terrain and chase camera** — demos beautifully, reads as a toy to a man counting diesel
- **Predictive maintenance** — rule-based, not learned. “Predictive” invites a claim we cannot defend
- **API access and SSO** — matters to a handful of enterprise buyers; invisible to everyone else
- **Telemetry intelligence & multi-camera** — needs fitted hardware, so it contradicts our own “no device needed” hook
- **Anything about the technology stack** — the customer is buying an outcome, not an architecture

How to use this board. Every campaign leads with one hero feature, proves it with one differentiator, and keeps the supporting list for the landing page. If a piece of content opens with something from the fourth column, it goes back for a rewrite.

Who else is the customer already using?

The category is split in two — tools that track a vehicle, and boards that find a load. Nobody's real competitor is a piece of software, though. It is a phone and a diary.

Positioning map

Placement is our reading of the market, not a vendor claim

VERIFIED — PUBLICLY REPORTED, SEPTEMBER 2026

- Indian telematics vendors (LocoNav, Fleetx, TrackoBit, Uffizio, Axestrack) are reported to compete **below roughly US\$3 per vehicle per month** for tracking software.
- LocoNav pricing circulated through resellers shows a **~₹6,000 first-year device plan with a ~₹1,800 annual renewal plus GST**. Dated document — re-confirm before any comparison asset uses it.
- WheelsEye sells a wired GPS device at retail **bundled with a multi-year app subscription**.
- Marketplaces publish network claims: **Vahak 10 lakh+ transporters, BlackBuck ~6 lakh truck owners, TruckSuvidha 24,000+ transporters**. Self-reported figures.
- Publicly, **tracking and load-matching are separate products** from separate vendors.

OUR HYPOTHESIS — NOT VERIFIED, DO NOT PUBLISH AS FACT

- That no incumbent covers freight *and* passenger *and* materials in one account at this price. **Assume somebody does until we have checked.**
- That price is the decisive lever for the 1–10 vehicle operator, and breadth is the lever for 10–100.
- That a one-time tracker charge will beat an annual renewal in a straight comparison.
- That the real switching contest is against a diary and a phone — so our hardest job is proving software is worth opening at all, not beating a rival's feature list.

Before any comparison page goes live: get current public pricing for three named competitors in writing, screenshot-dated. Never quote a competitor's price from memory or from this document.

THE OFFLINE ALTERNATIVES WE ACTUALLY DISPLACE

- The WhatsApp group** — free, instant, and where the work really moves. We do not beat it on speed; we beat it on proof and on not losing the thread.
- The commission broker** — finds the load, knows the people, takes a cut. Beaten only where a transporter can win the same work directly.
- The diary and the register** — trusted because it is his handwriting. Beaten only when the app is faster than writing it down.
- The phone call to the driver** — the single habit we are really replacing, and the one that makes the whole case in a ten-second demo.
- The local tracker dealer** — fits the box, takes the renewal, and is who the operator actually trusts. A partner to recruit, not only a rival.

The strategic read. We are not trying to out-track the tracking companies or out-list the load boards. We are trying to be the first thing a transporter opens in the morning — which means our competition for attention is WhatsApp, and our competition for money is the tracker renewal he already resents paying.

Current way → better way

This is the story for every ad, every sales call and every reel. Three customers, the same four beats: what today looks like, why it costs them, what changes, what improves.

OWNER · 3 VEHICLES

TODAY

Four WhatsApp groups for loads. A broker for the rest, who takes his cut. A ₹6,000 tracker on one vehicle, renewed every year. Papers in a folder in the cab. The return leg runs empty because finding a load for it means another twenty calls.

WHY IT COSTS HIM

Commission on work he could have won himself, a renewal for tracking alone, and half his kilometres unpaid. His diesel burns whether the vehicle is loaded or not.

WITH SAARTHI

He sees freight requirements he qualifies for and bids directly. All three vehicles track from the drivers' phones — no device to buy. Papers sit on the vehicle record and warn him before they expire. He posts the empty return leg as a return load.

RESULT

₹99 + ₹75 × 2 = ₹249 a month for all three, with no hardware. One extra loaded return trip covers a year of it.

FLEET · 25 VEHICLES

TODAY

A telematics contract per vehicle that shows a dot on a map. Dispatch in a spreadsheet. Documents in a drawer. A clerk who spends his week copying trip sheets into a register, and still cannot say what last month's Nagpur run actually cost.

WHY IT COSTS HIM

He is paying per vehicle for tracking, then paying people to do everything around it. He quotes from last year's numbers because this year's arrive too late to use.

WITH SAARTHI

Dispatch, tracking, documents, FASTag, fuel, EMI and maintenance on one record per vehicle. Driver scores carry reasons he can act on. Cost per trip is visible while the trip runs, so the next quote is priced on this month, not last year.

RESULT

₹199 + ₹75 × 24 = ₹1,999 a month for the whole platform across 25 vehicles — and a clerk's week returned to the business.

BUYER · BUILDER OR FACTORY

TODAY

Rings three transporters he knows. Takes whichever price sounds fair, from whoever picked up first. Pays an advance to a business he cannot check. Then rings the driver all day to find out where the consignment is, and has no proof of when it arrived.

WHY IT COSTS HIM

He never learns whether the price was good. A late delivery stops his site and he finds out when it has already happened. A dispute is his word against theirs.

WITH SAARTHI

He posts what he needs once. Verified suppliers and fleets bid; he compares real prices side by side and awards. He follows the delivery on a map without calling anybody, and the trip keeps its own record of when it arrived.

RESULT

Free, permanently. A better price because businesses competed for it, and proof of delivery he does not have to argue about.

Use the structure, not the words. Every ad, script and sales call follows the same four beats: **Today → What it costs you → What changes → What you get back.** Open on his day, never on our product. The product should not appear until the third beat.

The marketing funnel

Ten stages, and what we owe the customer at each one. If a stage has no content assigned, that is where the leads are leaking.

STAGE	WHAT WE SHOW	WHAT WE SAY	CTA	CONTENT TO CREATE
AWARENESS	A driver on a night highway. A yard at dawn. Never a dashboard.	"Still calling the driver to ask where he is?"	Watch / follow	15–30s reels in Hindi, pain-first. Highway photography. Zero product.
INTEREST	The phone tracking a vehicle with no device fitted.	"No device. No renewal. It already works."	See how	30–45s screen recording, one hand, one phone. Carousel: 5 things on one screen.
EDUCATION	The cost of the current way, in rupees.	"What an empty return leg actually costs you in a month."	Read / calculate	Blog + YouTube explainer. A cost-of-empty-kilometres calculator. Compliance checklist.
CONSIDERATION	Us beside the alternative, honestly.	"₹499 once, against ₹1,800 every year."	Compare	Comparison page (dated, sourced). Pricing page. "What it does not do" page.
DEMO / TRIAL	His own vehicle on the map, in his own language.	"Give me one registration number. Ten minutes."	Book a demo	10-minute demo script. WhatsApp demo-booking flow. Field-sales one-pager.
CONVERSION	The price, with nothing hidden behind a form.	"₹99 a month. Cancel whenever. No card to start."	Start free	Pricing page with a live vehicle-count calculator. 14-day Pro trial explainer.
ACTIVATION	The first vehicle moving on his own map.	"Add one vehicle and one driver. That is the whole setup."	Add your first vehicle	3-step onboarding video per language. WhatsApp day-1 and day-3 nudges.
RETENTION	What Saarthi caught for him this month.	"Two documents expiring, one EMI due, one vehicle overdue for service."	Open your brief	Monthly value email. Feature-of-the-month in-app card. Driver-score explainer.
REFERRAL	His own referral code and QR.	"The transporter you share this with gets the same price you did."	Share your code	Referral card for WhatsApp. Printed QR for the yard. Association bulk-onboarding kit.
ADVOC	Him, in his own words, on his own yard.	"Tell the next man what it changed."	Share your story	Case studies — only once real customers exist. Association testimonials.

The stage that decides everything is ACTIVATION. A transporter who never adds a second vehicle never renews. Measure "added a vehicle and completed a trip within 7 days" above every other number on the funnel.

Marketplace liquidity gates the top of the funnel. Awareness spend on the supply side is wasted if a requirement gets no bids. Grow buyers and sellers in the same district, in step — never nationally, and never one side alone.

Our six content pillars

Every piece we publish belongs to one of these. If it belongs to none of them, it does not get made. Suggested mix shown on each card.

Educate

25%

Teach him about his own problem, using his own numbers. Never mention the product.

- What an empty return leg costs over a year
- The documents that expire on a commercial vehicle, and what each lapse costs
- How to price a trip: diesel, toll, driver, EMI, maintenance
- City no-entry timings that cost a delivery day

Post: "Your Delhi-Jaipur run: where the money goes" carousel. **Reel:** 20s, a hand writing four costs on a diary page. **Hook:** "You know the freight rate. Do you know the trip cost?"

Demonstrate

25%

The product solving one real problem, in under a minute, on a phone held in one hand.

- Tracking a vehicle with no device fitted
- Posting a requirement and three bids arriving
- A document expiry warning firing before the date
- An SOS raised and a nearby vehicle alerted
- The driver's screen, switched to another language

Video: 45s screen recording, no music, no voiceover, just the flow. **Reel:** phone in the cab, thumb on the screen. **Hook:** "No device. Watch."

Prove

15%

Evidence, not adjectives. Until real customers exist, this pillar proves *the product*, never results we have not had.

- Pilot results from the first association, with their permission
- Bids received on a real requirement, screenshotted
- A side-by-side cost comparison, sourced and dated
- Later: customer stories, in their words, on their yard

Rule: no invented testimonial, no stock-photo customer, no rounded-up number, ever. One fabricated proof point destroys the "nothing here is invented" USP permanently.

Inspire

15%

The life, not the software. This is what gets shared into the WhatsApp groups we cannot buy our way into.

- The driver who got home because somebody nearby answered
- One vehicle to five: an operator's own account of it
- The women running transport offices nobody photographs
- Night highway photography, wordless, brand only

Reel: 30s, real audio from a yard at 5am. **Hook:** "A saarthi is the one who drives the chariot — and knows the way."

Trust

10%

We are asking a man to put his business in an app he has never heard of. Earn it in public.

- How verification works, and what we check
- What we do with his location data — and what we do not
- What Saarthi does *not* do yet, published openly
- The team, the office, the support number that a person answers

Post: "What we don't do yet" — the most trust-building page we can publish. **Hook:** "Ask us what it can't do."

Industry

10%

Be useful every week, whether or not he ever buys. This is what makes the account worth following.

- Diesel and CNG price movement on major corridors
- Toll revisions, permit and e-way bill rule changes
- Seasonal demand: harvest, monsoon, festival freight
- New city entry restrictions as they are announced

Format: a fixed weekly slot, same day, same design. Predictability is the point. **Hook:** "This week on the highway."

Language first, not translation later. Hindi is the primary language for Educate, Demonstrate and Inspire — write in Hindi, then adapt to English, rather than the other way round. English-first copy translated into Hindi reads like a form, and the audience can tell.

Fifty-two hooks, ready to use

First lines for ads, reels, emails and cold calls. Take them as written or as a pattern. Every one is backed by something the product actually does.

PAIN HOOKS

- "How many times did you call the driver today?"
- "Still finding loads in four WhatsApp groups?"
- "The truck came back empty. Again."
- "The permit expired. Nobody told you."
- "You learned what the trip cost after it was over."
- "You are paying for a truck that is driving home empty."

CURIOSITY HOOKS

- "Why does your tracker need renewing every year?"
- "What does one empty return leg cost in a year?"
- "There is a reason that run never makes money."
- "Your driver has a score. Do you know what moved it?"
- "What is your empty-return percentage? Most owners have never counted it."

BENEFIT HOOKS

- "See every vehicle without calling anybody."
- "Say what you need once. The prices come to you."
- "Sell the empty leg home."
- "Your papers warn you before they expire."
- "The load, the truck, the papers and the money — one screen."
- "Every paper for every vehicle, in one place."
- "The whole fleet on one screen, in your pocket."

COST-SAVING HOOKS

- "₹99 a month. Not ₹99 a day."
- "₹499 once. No renewal. Ever."
- "Three vehicles, ₹249 a month, no device to buy."
- "Stop paying commission on work you could win yourself."
- "Ten months' price, twelve months' use."

TIME-SAVING HOOKS

- "Forty calls a day becomes one screen."
- "Ask once instead of ringing three people."
- "The trip writes its own register."
- "Find the weighbridge without asking anybody."
- "Post once. Compare three prices before lunch."

TRUST HOOKS

- "Every load here is somebody's actual load."
- "Verified business. Verified vehicle. Verified driver."
- "We show you the number and where it came from."
- "No fake listings. We would rather show you an empty board."
- "Ask us what it can't do."
- "One month at a time. Leave whenever you like."
- "We will tell you honestly what your district looks like before you pay."

COMPARISON HOOKS

- "₹499 once, or ₹1,800 every year. Your call."
- "Their app tracks your truck. Ours runs your business."
- "A board finds the load. A tracker shows a dot. You need both."
- "One app, or four. Same money."
- "You already pay for tracking. This costs less and does the rest too."

PRODUCT DEMO HOOKS

- "One registration number. Ten minutes. Your own vehicle on the map."
- "Watch a requirement get three bids in one afternoon."
- "This is what your driver sees — in his own language."
- "Ten minutes. Then decide."
- "Post a requirement now. See what comes back."

EMOTIONAL HOOKS

- "He broke down at 2am. Somebody was already coming."
- "Your driver's family should not have to wonder."
- "The business should run even when you are not sitting in it."
- "A saathi is the one who drives the chariot — and knows the way."
- "You built this with two trucks. It should not still need all of you."
- "Twelve hours on the road. He should not be on hold as well."
- "The road does not wait for the paperwork."

Testing rule: run three hooks per campaign, same creative, same audience, same budget. Kill the two that lose after 1,000 impressions each. Keep a running sheet of winners — it becomes the brand voice.

Where should we market?

Not everywhere, and not equally. This audience lives on WhatsApp and YouTube, decides in person, and is reached through people it already trusts.

CHANNEL	ROLE	AUDIENCE	CONTENT	OFFER	CTA
PRIMARY — ROUGHLY 70% OF EFFORT AND BUDGET					
WhatsApp Business	CONVERT	Owner-operators, small fleets, associations	Vertical video, price card, referral card, demo booking	Free start · 14-day Pro trial	"Reply GADI for a 10-min demo"
Direct & field sales	CLOSE	Transport nagar, yards, taxi stands, material markets	One-pager, live demo on his own vehicle, printed QR	Set up his first vehicle on the spot	"Give me one number plate"
Associations & unions	SCALE	Office bearers, then every member behind them	Member briefing, SOS demo, bulk onboarding kit	Free pilot for the association's members	"Run it for your members for 90 days"
YouTube (Hindi + regional)	TRUST	Everyone in the trade researching before buying	8–12 min walkthroughs, cost explainers, comparisons	Free start, linked in every description	"Try it on one vehicle"
Google Search & SEO	INTENT	People already searching to solve this	Pricing page, comparison pages, cost calculators	Transparent price, no form in front of it	"See the price"
SECONDARY — ROUGHLY 25%					
Instagram & Facebook	REACH	Owner-operators, travel operators, younger fleet successors	Reels from the pillars; highway photography	Free start	"Link in bio"
Meta Ads	LEADS	District-level targeting around transport hubs	Price-led and pain-led creative, tested three at a time	Free start · demo booking	WhatsApp click-to-message
Google Ads	CAPTURE	Bottom-funnel: tracker price, transport software, load	Price-forward text ads straight to the pricing page	Compare honestly and let the price argue	"₹99/month — see plans"
Partnerships	MULTIPLY	Fuel pumps, tyre and repair shops, tracker dealers, vehicle dealers, RTO agents	Counter QR, co-branded card, dealer briefing	Referral commission on each account they bring	"Scan at the counter"
Referral programme	BUILT IN	Existing users and the field sales network	Personal referral code and QR, already in the product	Commission per qualifying account — rates still to be set	"Share your code"
HOLD FOR LATER — ROUGHLY 5%, REVISIT AFTER THE FIRST PAYING CUSTOMERS					
LinkedIn	ENTERPRISE	Shippers, manufacturers, 50+ vehicle fleets	Founder posts, operations write-ups	Pilot conversation	"Book a call"
Email	RETAIN	Buyers and enterprise only — low reach in the trade	Monthly value summary, onboarding series	Feature education, not discounts	"Open your monthly brief"
Expos & trade press	LATER	The whole industry at once	Stand, live demo, printed comparison	Expensive and slow — needs proof first	"See it at the stand"

The one channel rule. Every channel follows the same chain — **audience → content → offer → CTA**. If any link is missing, the spend is wasted. And note where the money is: this customer is won *in person or by someone he trusts*, and the digital channels exist to make that conversation shorter.

What content should we create?

A repeatable week. Fixed slots beat inspiration — the audience learns when to expect us, and the team stops deciding what to make every morning.

CONTENT TYPE	PURPOSE	CONCRETE EXAMPLE FOR SAARTHI	FORMAT	CADENCE
Educational	Awareness	"Where the money goes on a Delhi-Jaipur run" — diesel, toll, driver, EMI, maintenance	Carousel + blog	2×/week
Product demo	Show capability	Tracking a vehicle with no device fitted — 45s screen recording, one thumb	Reel + YouTube	2×/week
Problem / solution	Generate demand	"Forty calls" vs "one screen" — split screen, same working day	Reel	1×/week
Comparison	Differentiate	₹499 once vs an annual renewal; a load board and a tracker vs one account	Carousel + page	2×/month
Industry useful	Retain attention	"This week on the highway" — diesel movement, toll changes, new city restrictions	Post	Weekly, fixed day
Language demo	Differentiate	The same screen in Hindi, Tamil, Bengali, Punjabi — one cut per language	Reel series	2×/month
Safety story	Emotion + share	An SOS raised at night and answered by a vehicle nearby	Reel + long post	1×/month
Trust / transparency	Reduce risk	"What Saarthi doesn't do yet"; how verification works; what we do with location data	Post + page	1×/month
Walkthrough	Consideration	"Your first week on Saarthi" — add a vehicle, a driver, run a trip	YouTube 8–12 min	2×/month
Case study	Conversion	Blocked until real customers exist. Then: the association pilot, with named permission	Page + video	When earned

THE REPEATABLE WEEK

Monday	Industry useful — "This week on the highway"
Tuesday	Educational carousel
Wednesday	Product demo reel
Thursday	Problem / solution reel
Friday	Demo reel or language cut
Saturday	Inspire — a person, a yard, a road
Sunday	Rest. Nothing scheduled.

WEEKLY OUTPUT TARGET

6 short videos **2** carousels **1** long video
 Shoot in one session. One afternoon in a yard with a phone produces a fortnight of vertical video. Do not wait for a crew.

REUSE RULES — ONE IDEA, SIX ASSETS

- A long YouTube walkthrough cuts into **4–6 reels**
- A reel's script becomes **a carousel** and **a WhatsApp broadcast**
- A carousel becomes **a blog post** for search
- A blog post becomes **the field-sales one-pager**
- Every asset is made in Hindi first, then English

Nothing is made for one channel only. If a piece cannot be reused at least three times, question whether it is worth producing.

The sales message

Three lengths, and the eight objections that will come back. Learn the answers — and notice that several of them are an admission. Admitting what we do not have yet is what makes the rest believable.

10 SECONDS

ONE SENTENCE

“Saarthi runs your whole transport business from one app — the work, the vehicles, the papers and the money — from ₹99 a month.”

30 SECONDS

“You post what you need, or you bid on what somebody else posted. The moment you accept, the trip exists and tracks itself — no device to buy, because the driver's phone already reports where it is. Papers, FASTag, toll, EMI and service history sit on the same vehicle record, and the papers warn you before they expire. ₹99 a month for your own vehicles, ₹199 for everything, ₹75 for each extra vehicle. It is in 23 Indian languages.”

60 SECONDS — PROBLEM, SOLUTION, VALUE, ASK

Problem. “Most transporters run the business across five apps, a diary and forty phone calls a day. The load board does not know your truck, your truck does not know your papers, and your papers do not know your money. So you do all the joining, personally, every day.”

Solution. “Saarthi puts all of it in one account. Say what you need once and verified businesses bid on it. Accept one and the trip starts tracking itself. Every vehicle carries its own papers, tolls, EMI, fuel and service history, and tells you before something expires. If a driver is in trouble, one tap alerts the vehicles nearest to him.”

Value. “Three vehicles cost you ₹249 a month with no hardware at all. One extra loaded return trip pays for the year. And your drivers use it in their own language, which is the difference between software you bought and software that gets opened.”

Ask. “Give me one registration number. I will set the vehicle up now, you will see it on the map before I leave, and it costs you nothing to keep using it.”

OBJECTION

RESPONSE

“I already have a GPS tracker.”

Keep it. Saarthi does not need one — and it does the twelve things your tracker does not: bidding, documents, toll, EMI, maintenance, driver scoring. Then compare your renewal against ₹99 a month.

“My driver will never use an app.”

He mostly does not have to — position comes from the phone in his pocket. When he does open it, it is in his language. Show him the driver screen in Hindi and let him decide.

“₹99 is too cheap. What is the catch?”

Our mapping and routing run on open data with no per-request licence, so our cost per vehicle is genuinely low. We would rather have ten thousand transporters at ₹99 than fifty at ₹5,000. There is no catch and no lock-in — it is monthly.

“Who else is using it?”

Answer honestly: “We are starting with district associations, and you would be early. That is why you get our phone number, not a ticket queue.” **Never invent a customer name or a number.**

“Will I actually get loads on it?”

Answer honestly: a marketplace is worth exactly what is on it, and we are building it district by district. Buy it to run your vehicles. The work that comes through it is upside, and we will tell you straight when your district is live.

“I do not trust putting my business in an app.”

Then do not. Put *one vehicle* in it, free, and carry on exactly as you do today. If in a month it has not saved you a single phone call, stop.

“What if you shut down?”

Fair question. There is no contract, no hardware you are stuck with and no annual payment we are holding. You are never more than one month committed, and your records stay yours.

“I will think about it.”

“Think about it with the app open. One number plate, ten minutes, and it costs nothing.” Setting up the first vehicle *is* the close — never leave without it.

The rule that holds this together. Two of these answers are admissions — we have no customers yet, and the marketplace is thin. Say both out loud, early, unprompted. A salesperson who volunteers the weakness is believed on the strengths; one who is caught hiding it loses the deal and the district.

What do we actually sell?

The prices below are the ones built into the product today. Everything marked **HYPOTHESIS** is an idea, not a plan — do not put it in front of a customer.

THE REVENUE LADDER

Entry offer

Saarthi Free — the buyer's account. Post needs, compare bids, follow the delivery. Plus a 14-day Pro trial on every new business account.

₹0

Core product

Saarthi Personal — one vehicle, up to five. Live location, documents, service history, EMI, toll, driver score, SOS.

₹99/mo

Premium plan

Saarthi Business — the whole platform. Marketplace and bidding, dispatch, analytics, AI, travel, association network, API.

₹199/mo

Add-ons

+1 Vehicle ₹75/month, stacked as the fleet grows. Saarthi Tracker ₹499 once, per vehicle, never rented.

₹75 · ₹499

Recurring revenue

Annual prepay: ₹990 and ₹1,990 — ten months' price for twelve months' service. The single best retention lever we have.

10 for 12

WHAT A CUSTOMER ACTUALLY PAYS — USE THESE IN EVERY CONVERSATION

FLEET	PLAN	PER MONTH
1 vehicle	Personal	₹99
3 vehicles	Personal + 2	₹249
5 vehicles	Personal + 4	₹399
10 vehicles	Business + 9	₹874
25 vehicles	Business + 24	₹1,999
50 vehicles	Business + 49	₹3,874

THE NUMBER THAT REFRAMES THE CATEGORY

₹75

per vehicle, per month, everything included

Roughly **US\$0.90**. Indian telematics vendors are reported to compete below US\$3 per vehicle per month *for tracking alone*. Lead with this number for any fleet above five vehicles.

WHY THE PRICING IS SHAPED THIS WAY — EXPLAIN IT, IT BUILDS TRUST

- Every plan starts at **one vehicle**. A bundle of five overcharges the man with two.
- Extra vehicles cost the same flat amount each, so nobody is told their next vehicle needs a bigger plan.
- The tracker is charged **once** because it is a device, not a service. Renting a box already bolted to somebody's vehicle is how dashboards go dark.
- An operator running more vehicles than their plan covers is **never cut off**.
- Annual is **ten months for twelve** on every plan and on the vehicle add-on — the same discount everywhere, so nobody has to work it out.
- **SOS is on every plan that runs a vehicle**, including the cheapest. Safety was never going to be the thing we upsell.
- Free covers **no** vehicles because a free account does not operate one. It is a description of that customer, not a limit to push him past.

BUILT, BUT NOT YET SELLABLE — KNOW THIS BEFORE YOU PROMISE ANYTHING

- **There is no self-serve checkout.** Plans, limits and entitlements are enforced, but a customer cannot pay online today. Every early sale is collected manually.
- **No payment or settlement layer.** Saarthi does not touch the money between a buyer and a transporter yet.
- **Commission rates for the referral programme are not set.** The mechanism exists; the numbers do not. Do not quote a rate.

Consequence for marketing: the first campaigns sell a *start*, not a purchase. Optimise for accounts created and vehicles added — the money is collected in a conversation.

PRICING HYPOTHESIS — INTERNAL ONLY, NEVER CUSTOMER-FACING

- **Transaction revenue.** A staged customer payment (an advance on confirmation, the balance on delivery) is specified but not built. If it ships, a small platform fee on settled value could exceed subscription revenue at scale.
- **Marketplace take rate.** Untested. Charging on a marketplace this thin would kill the liquidity we do not yet have. Revisit only once requirements reliably attract bids.
- **Association licence.** A per-member annual fee paid by the association rather than the member. Worth testing — it converts a hundred sales into one.
- **Tracker margin.** ₹499 one-time must be confirmed against landed cost before it is advertised at scale.
- **Enterprise tier.** API access and SSO already exist on Business. A negotiated contract for 100+ vehicle fleets and shippers is the obvious high-value line — and the one furthest from our current audience.
- **Used-vehicle listings.** A fee to publish a vehicle for sale with its verified evidence pack. Low volume, high intent, and it costs us nothing to offer.
- **Partner commissions.** Fuel, tyre, insurance and finance referrals sit naturally beside records we already hold. Attractive, and the fastest way to lose trust if it ever changes what the product recommends.

No projection in this document promises profitability. These are lines to test, and each one needs Sir's sign-off before it reaches a customer.

What should we test first?

Six short-cycle experiments, ordered by how fast they tell us something we cannot guess. Each one is designed to be killed cheaply.

#	TARGET	OFFER	CHANNEL	MESSAGE	THE TEST	SUCCESS METRIC	COST	LEARN
01	One district transport association	Free for every member for 90 days, set up by us	Direct, office bearers	"Give your members something worth the membership fee — starting with SOS."	Onboard 20 member vehicles in one week	≥10 vehicles still active in week 4	Low — time only	Whether one relationship buys a hundred accounts
02	Buyers in one district	Free, permanently	Field sales + contractor groups	"Post what you need. Verified businesses bid. Free."	Get 10 real requirements posted in 14 days	≥3 bids per requirement within 6 hours	Low	Liquidity — the one number the whole marketplace rests on
03	Owner-operators, 1-5 vehicles	₹99, no card, no device	Meta ads → WhatsApp	"₹99 a month. No device to buy. Stop calling the driver."	₹15,000 across 3 hooks × 2 districts, 14 days	Cost per qualified WhatsApp lead under ₹150	₹15,000	Whether price alone pulls, and which hook wins
04	Anyone who signs up	Saarthi Tracker, ₹499 one time	In-app + WhatsApp	"₹499 once. No renewal, ever."	Pre-order page. Collect intent, not money, until margin is confirmed	≥15% of active accounts register intent	Very low	Hardware demand before any inventory is bought
05	Taxi, travel & tour operators	Business plan, free for 60 days	Direct + Instagram	"Cab and tour requests, coming to you instead of a portal."	Sign 5 operators in one tourist district	≥1 cab requirement quoted per operator per week	Low	Whether the passenger side stands on its own, or needs freight first
06	Everyone active for 30+ days	Annual prepay — ten months for twelve	WhatsApp + in-app	"Pay for ten months, use it for twelve."	Offer to every account at day 30	≥20% take the annual over the monthly	None	Willingness to commit — the strongest retention signal available

Run 01 and 02 first, in the same district. They are the cheapest and they answer the biggest question: does a marketplace form at all when supply and demand are introduced together in one place?

One district at a time. National spend on a thin marketplace buys disappointed users. Concentrate everything geographically until a single district works, then copy it.

No experiment here promises profit. Each is designed to *disprove* an assumption cheaply. An experiment that fails in two weeks for ₹15,000 is a success.

The first 30 days

A pre-launch plan, because that is where we are. The goal of month one is not revenue — it is a district where the marketplace visibly works, and a message we have tested on real people.

Week 1

POSITIONING

Decide what we say, and to whom. Nothing is published this week.

- Pick **one district** and commit to it. Everything else waits
- Interview 10 transporters and 5 buyers in that district. Record the words they use
- Verify three competitors' current public pricing, screenshot-dated
- Confirm the ₹499 tracker margin and the referral commission rates with Sir
- Lock the message on page 7 against what the interviews actually said
- Brief the field team on the eight objections and the two admissions

Done when: we can state the message in one sentence and ten transporters have already heard it.

MONTH 1 GOAL

One district where a posted requirement reliably attracts bids.

Week 2

ASSETS

Build only what week 3 will actually use. Nothing speculative.

- Landing page with the price visible and no form in front of it
- Waitlist or sign-up destination, and WhatsApp Business set up properly
- One afternoon in a yard: shoot a fortnight of vertical video in one session
- 6 reels and 2 carousels, Hindi first
- Field one-pager, the 10-minute demo script, printed referral QR
- Association briefing pack for experiment 01

Done when: a salesperson can walk into a yard and close without asking marketing for anything.

MONTH 2

Collect money manually from the accounts that already rely on it.

Week 3

CONTACT

Everything meets a real customer. Supply and demand go live together, in the same district.

- Launch experiment **01** (association) and **02** (buyers) together
- Start experiment **03** — ₹15,000 of Meta ads, 3 hooks, 2 districts
- Begin publishing daily against the fixed weekly calendar
- Field sales in the transport nagar every working day
- Open the tracker pre-order intent page
- Onboard every account personally — by hand, by phone, no exceptions

Done when: real requirements are being posted and real businesses are bidding on them.

MONTH 3

Copy the district that worked into the two next to it.

Week 4

READ & DOUBLE DOWN

Decide what to stop. Stopping is the point of this week.

- Kill the two losing ad hooks; put the whole budget behind the winner
- Measure the only number that matters: **bids per requirement within 6 hours**
- Measure activation — vehicle added and a trip completed within 7 days
- Ring every account that signed up and did nothing. Ask why, and write it down
- Offer annual prepay to everyone past day 30 (experiment 06)
- Write the month-one honest review: what worked, what we were wrong about

Done when: we know which single channel to put month two's money into — and which to stop.

ONLY THEN

Spend nationally. Not before a district works without us pushing it.

The team's daily, weekly and monthly checklist

Marketing at this stage is a habit, not a campaign. This is the list the team works through without being asked.

Every day

BEFORE 11AM

Nothing here takes more than an hour in total. Missing a day is visible within a week.

- **Answer every lead within 15 minutes.** In this trade a lead that waits an hour has already rung somebody else
- Publish the day's scheduled piece — the calendar decides, not the mood
- Reply to every comment and every WhatsApp message personally
- Check yesterday's ad spend, cost per lead and which hook is winning
- Ring two accounts that signed up and have not added a vehicle
- Log every objection heard today, in the customer's own words

The one that matters: response time. It is the cheapest advantage we have over every incumbent, and it costs nothing.

Every week

FRIDAY REVIEW

One hour, whole team, same slot. It ends with decisions, not discussion.

- Produce next week's content in **one session**, not daily
- Test one new hook against the current winner — same audience, same budget
- Review the funnel: where did people stop this week?
- Read the objection log aloud. Any objection heard three times becomes content
- Speak to two customers. Not a survey — a conversation
- Check one competitor's public pricing and messaging for changes
- Try one growth idea that costs nothing

Kill rule: any hook, creative or channel that loses two weeks running is stopped, not "given more time".

Every month

WITH SIR

The numbers meeting. Bring the honest version, including what did not work.

- Cost of acquiring a customer, by channel, against the payback rule opposite
- Conversion at every funnel stage, and which stage leaks worst
- Retention and churn — and *why* people left, from actual calls
- Revenue, average revenue per account, annual prepay take-up
- Which channel is scalable and which is a treadmill
- Marketplace liquidity per district — bids per requirement
- Refresh this playbook: every claim still true, every price still current

Standing question: if we could only keep one channel next month, which one, and what evidence says so?

The unit economics rule that governs every spending decision. Average revenue per account is roughly **₹150–₹300 a month**. A customer acquired for ₹600 pays that back in two to four months — *only* if he stays. This price point cannot be built on paid advertising alone. Referral, associations, partnerships and field sales have to carry the volume; paid media exists to warm them up. Any channel with a CAC above ₹800 gets stopped and reported the same week.

The KPI scoreboard

Saarthi has no marketing history, so **every figure below is a target, not a result**. Replace each one with an actual as soon as there is an actual.

Awareness

TARGET ONLY

METRIC	M1	M3
Reach	150k	500k
Video views	50k	200k
Site sessions	3,000	12,000
Followers	2,000	10,000
WhatsApp broadcast reach	500	4,000
YouTube watch hours	300	1,500
Districts covered	1	3

Vanity unless the next column moves.
Never report reach without reporting leads beside it.

Acquisition

TARGET ONLY

METRIC	M1	M3
Qualified leads	150	600
Cost per lead	<₹150	<₹100
Lead → account	25%	35%
Accounts created	40	200
Demos booked	60	220
Demo → account	40%	55%
Field visits / week	40	100

A "qualified" lead operates or hires a vehicle. Everyone else is traffic.

Activation

THE ONE THAT DECIDES IT

METRIC	M1	M3
Vehicle + trip in 7 days	40%	60%
Requirements / week	5	40
Bids per requirement <6h	≥3	≥5
Requirements awarded	50%	70%
Second vehicle added	20%	40%
Driver app in use	50%	75%
Documents uploaded	60%	80%

Bids per requirement is the single most important number in this document. Below three, stop spending on awareness.

Revenue

COLLECTED MANUALLY

METRIC	M1	M3
Paying accounts	10	75
Avg revenue / account	₹150	₹300
Monthly recurring	₹1.5k	₹22.5k
Cost to acquire	<₹600	<₹400
Payback period	4 mo	≤2 mo
Vehicles under subscription	25	220
Tracker intent registered	—	15%

Small numbers on purpose. At this stage the question is whether anyone pays at all, not how many.

Retention & growth

TARGET ONLY

METRIC	M1	M3
Weekly active accounts	50%	65%
Month-1 churn	<25%	<12%
Annual prepay take-up	—	20%
Referred accounts	10%	30%
Organic / direct	15%	35%
Day-30 retention	75%	88%
Referral codes shared	15	90

Lifetime value cannot be computed until we have seen real churn. Do not publish an LTV figure before month six.

Three rules for this board. A figure only moves from Target to Actual when it comes out of the product's own records. Nothing is rounded up. And if a number is bad, it is reported bad — this is the same company that tells customers nothing on the platform is invented.

Report weekly on four numbers only: qualified leads, cost per lead, activation rate, and bids per requirement. Everything else is monthly. A dashboard nobody reads is worse than no dashboard.

The marketing cheat sheet

The whole playbook on one page. If a piece of work does not fit somewhere on this sheet, it is not Saarthi marketing.

WHAT?

One app that runs a vehicle business end to end — the work, the vehicles, the papers, the cost and the safety net.

WHO?

Fleet owners, taxi and tour operators, material suppliers and associations. Buyers use it free.

PROBLEM?

Five apps, a diary and forty calls a day. Empty return legs, broker commission, papers that expire unnoticed.

PROMISE?

More loaded kilometres, far fewer phone calls, and nothing that expires behind your back.

WHY US?

FOUR MARKETS, ONE FRONT DOOR GOODS & PASSENGERS ₹99-₹199 + ₹75/VEHICLE
₹499 TRACKER, ONCE 23 INDIAN LANGUAGES SOS ON EVERY PLAN NOTHING INVENTED
EVERY NUMBER TRACEABLE

WHERE?

WhatsApp · field sales · associations · YouTube in Hindi · Google search. Then Instagram, Meta ads and partnerships.

MESSAGE?

"Everything your vehicles need, on one account."

Open on his day, never on our product. Today → what it costs you → what changes → what you get back.

OFFER?

Free for buyers · ₹99 Personal · ₹199 Business · ₹75 per extra vehicle · ₹499 tracker, one time · annual = ten months for twelve.

CTA?

"Start free — no card, no device, no salesman."

In person: "Give me one registration number. Ten minutes."

MEASURE?

Four numbers, weekly:

QUALIFIED LEADS COST PER LEAD ACTIVATION IN 7 DAYS BIDS PER REQUIREMENT

Everything on this sheet is a target until the product's own records say otherwise.

Brand & creative direction

Saarthi already has a visual language and it is in use on the product and the site. Hold every asset to it — consistency is what makes a new brand look established.

PALETTE — TWO LIGHT SOURCES, ALWAYS

#18181B Ground

#062A66 → #2360BE

#E8590F → #FF8C2E

Cold navy from behind or above; **one** warm saffron accent in the scene. That pairing is what makes separately produced images look like a single shoot.

TYPOGRAPHY

Inter throughout, with Segoe UI as the system fallback. Headlines heavy and tightly tracked; body at a comfortable reading weight. Indic scripts render in Nirmala UI — check every language renders before an asset ships.

Numbers are the loudest thing on any layout. A price, a count or a percentage should be the first thing the eye lands on.

LOGO & LOCKUP

- Full colour on light surfaces only. The navy in the wordmark disappears against near-black
- On dark creative, set **WorldX Saarthi** as type filled with the navy→saffron gradient — the same treatment the site uses. Never place the full-colour mark on black
- Clear space around the lockup of at least the height of the **S**
- Never recolour, stretch, rotate, outline or add a shadow to the mark
- “Manage · Track · Move · Together” is part of the lockup, not a headline. Do not use it as ad copy

PHOTOGRAPHY & ILLUSTRATION

- **Near-black, always.** Blue hour, night, dawn. Nothing shot in daylight
- **Unbranded Indian-market vehicles.** Flat-front cabovers, Indian sedans, SUVs, buses, auto-rickshaws — not American tractors or Euro sleepers
- **Both kinds of vehicle.** Passenger vehicles appear regularly; trucks-only photography contradicts the product
- **No badges, liveries, number plates or text** in any frame — recognisable brand marks are a legal problem as well as a design one
- Wet tarmac, volumetric haze, deep blacks that keep their detail

BRAND PERSONALITY

STRAIGHT **PRACTICAL** **RESPECTFUL** **CONFIDENT, NOT LOUD**

ON THE DRIVER'S SIDE

Saarthi is the experienced hand in the passenger seat who knows the road. Not a disruptor, not a start-up shouting. The audience has been sold to badly for years and can hear it coming.

TONE OF VOICE

- Short sentences. Plain words. Rupees, not “ROI”
- Speak to one person, never to “fleet operators” as a category
- Hindi first for the trade; English first for enterprise and buyers
- Never exaggerate a number, and never round one up
- Say what it does not do — that is the brand's whole posture

NEVER

- Stock photography of foreign trucks or smiling models in hard hats
- Invented testimonials, logos, customer counts or ratings
- “India's first”, “the only”, or any superlative we have not verified
- Competitor prices quoted from memory or from this document
- A map of India in any published asset without a correct official outline
- Screenshots containing a real person's vehicle, phone number or licence
- Bright, daylight-lit creative — it breaks the whole visual system
